

## Fingerprint Collection Instructions

There are three main types of fingerprints:

**Whorls**

which has **two** delta points

**Loops**

which has **one** delta point

**Arches**

which has **no** delta points

When collecting fingerprints, make sure that the deltas and ridge patterns are clear and visible.

Avoid using too much graphite, as excessive graphite can blur or cover the fine fingerprint details.

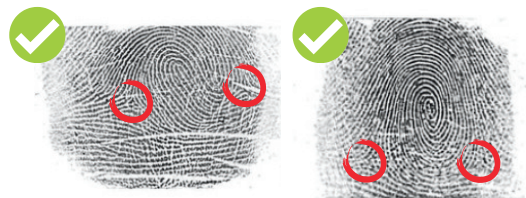

Apply just enough to show the lines clearly.

Carefully press or roll each fingertip, and ensure that all prints are neat, complete, and readable before you move on to the next finger.

## Fingerprint Collection Samples

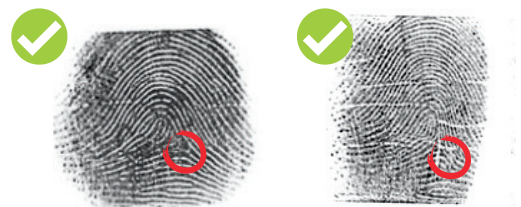

These are whorl pattern  
they supposed to have two deltas,  
but we can only see one in this print.

These are the correct examples,  
two deltas are clearly visible and the prints are clear.

This is a loop pattern  
it's supposed to have one delta,  
but we can't see any in this print.

These are also correct,  
one delta is visible and the prints are clear.

Reminder: remember to try multiple trials and make several attempts to fill all thirty boxes on the paper. Use different approaches and create new prints each time.

## 指纹采集说明

指纹主要分为三种类型：

**斗型纹**

具有两个三角位

**箕型纹**

具有一个三角位

**弧型纹**

没有三角位

在采集指纹时，请确保三角区和指纹纹线都清晰可见。

不要使用过多的石墨粉——太多石墨会盖住细节，使指纹模糊。只需使用适量石墨，让纹线清楚显现即可。

采集时要轻轻地按压或滚动手指，确保每个指纹都完整、整洁、易于辨识，再继续下一个手指。

## 指纹采集参考

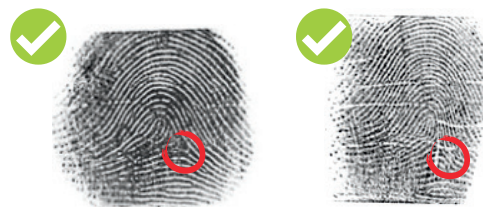

这两是螺旋型指纹  
理论上应有两个三角位，  
但在这个指纹中只看到一个。

这些例子是正确的  
可以清楚地看到两个三角位，而且指纹纹线清晰完整。

这是箕形指纹  
理论上应有一个三角位，  
但在这个指纹中看不到。

这些也是正确的  
有一个三角位，而且指纹纹线清晰完整。

温馨提醒：记得多尝试几次，直到三十个方格都填满。  
每次可以用不同的方法，重新采集新的指纹。
